AUGUST MEETING HELD AT YORK HARBOR, MAINE

With an attendance of 50 members and guests, New Hampshire Chapter, AIA, held its annual Ladies' Day outing and meeting at the Marshall House, York Harbor, Maine, Thursday afternoon and evening, August 20.

Horace Bradt was general chairman in charge of the event and President John R. Holbrook presided at the dinner and executive committee meeting.

President Holbrook announced appointment of several committees which are listed elsewhere in this issue of New Hampshire Architect.

A clambake was the highlight of the entertainment for members and guests, which was followed by dancing in the hotel ballroom.

CHAPTER MEETINGS TO BE HELD ON FRIDAYS IN FUTURE

Quarterly meetings of New Hampshire Chapter, AIA, may be held on Fridays, rather than Thursdays, in the future if a suggested amendment to the by-laws of the chapter is approved, it was disclosed at the August meeting held at the Marshall House.

For the past year many chapter members have felt that a change from Thursday to Friday would result in many more members attending the quarterly sessions.

If the meetings are held on Fridays in the future, President Holbrook says he looks for larger attendance in the coming months.

CHAIRMEN FOR FUTURE MEETINGS NAMED BY HOLBROOK

Plans for future meetings of New Hampshire Chapter, AIA, were made at the August meeting with appointment of chairmen for the upcoming sessions made by President Holbrook.

Robert L. Snodgrass is chairman of the November meeting which is to be held in Nashua. The February 1960 meeting will have Richard Koehler as its chairman with the meeting to be held in the Queen City. The May meeting, to be held in Concord, will be in charge of Arnold Perreton. No chairman has been named as yet for the August 1960 meeting though plans for the present call for the outing to be held either at a seacoast or mountain resort.

Dates and exact locations of the future meetings will be announced by Secretary Andrew C. Isaak.

Each chairman is to arrange for the speaker at the coming meetings, President Holbrook announced.

ASSOCIATE MEMBERS APPROVED

At the August meeting Russell E. Hersey was approved as an associate member of the chapter. He has been a junior associate.

Philip S. Tambling at the same meeting was approved as a junior associate.

Mr. Hersey and Mr. Tambling are employed in the offices of Maurice E. Witmeier of Portsmouth.

"THE DURACRETE STORY"

More than 100 persons interested in building construction were guests of Dante Donati, owner of the Duracrete Block Company, on Tuesday, August 4.

Included in the group were architects, contractors, engineers, bankers and dealers in masonry products from New Hampshire and Massachusetts. Gov. Wesley Powell was honored guest.

A tour of the Duracrete plant at Hooksett opened the program with Mr. Donati and Victor Kjellman conducting the visitors throughout the huge plant. During the tour, the manufacture of Duraglaze was explained by the company officials, with architects and contractors expressing keen interest in the new product.

A cocktail hour was enjoyed before the group left for a dinner at the Chanticleer in Derry, also sponsored by Mr. Donati.

Gov. Powell gave a brief non-political talk after the dinner, and expressed his admiration for Mr. Donati in developing one of the largest concrete block plants in New England.

A movie, "The Duracrete Story," was shown for the first time, and was narrated by Norman Bailey, well known New Hampshire radio announcer, who also served as toastmaster at the dinner.

Governor Powell listens intently to D. Donati as he explains part of process in manufacture of Duraglaze concrete block.

Honored guests and officials at "The Duracrete Story" were left to right: Angelo Bacchi, proprietor of the Chanticleer; Governor Powell, Dante Donati, Arthur Stone, Northeast Brick Co.; and Norman Bailey, toastmaster.

"FAR HORIZONS"

Residence of Mrs. & Mrs. J. Marshall Hubbard, Nashua, N. H.

ARCHITECTS

TRACY & HILDRETH, AIA, Nashua, N. H.

Located on the top of hill just outside the city of Nashua is this contemporary residence for Mr. and Mrs. J. Marshall Hubbard. The site possesses a magnificent view of distant mountains and overlooks the city. The selection of exterior materials was dictated by the rural setting of pines, birches, junipers and stone walls.

The carport is used during the summer months as an outdoor living room, tastefully furnished with rustic and modern outdoor furniture.

The study is a spacious room with built-in bookcases and storage cabinets. The mellow woodwork blends beautifully with the textured grass cloth on the walls.

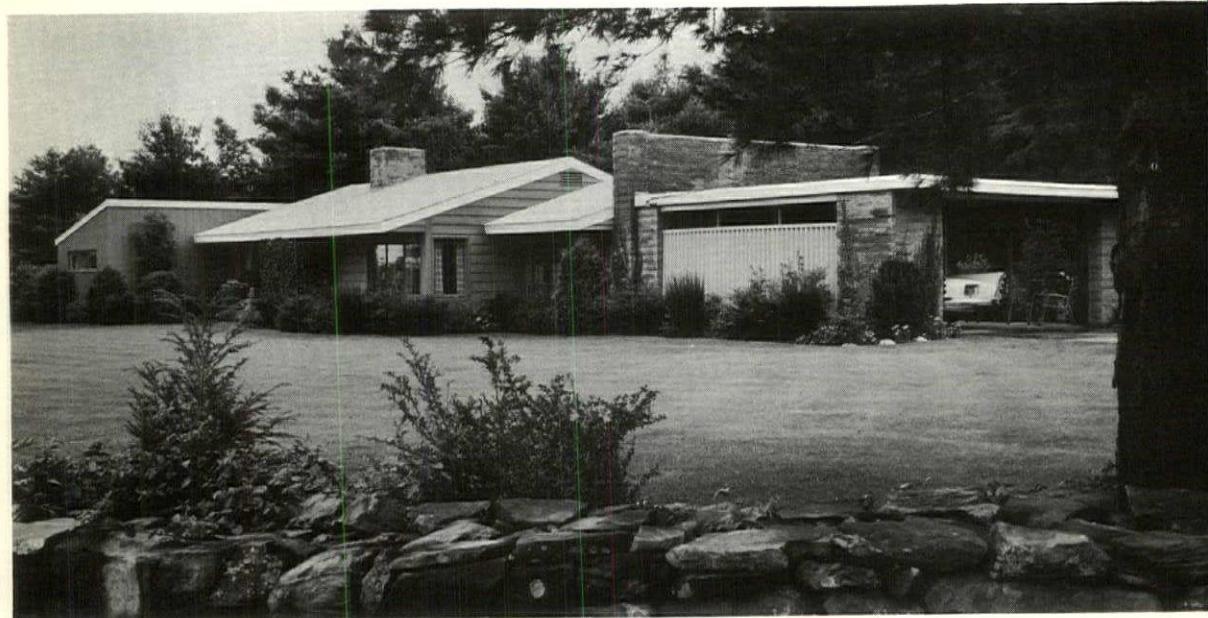

The living room and dining room form an L-shaped space with full-height windows opening onto a garden area. The living room fireplace has a black slate trim over which have been hung two beautiful teakwood and ivory panels. The living room has wall-to-wall carpet and the dining room flooring is polished Vermont marble.

The entrance hall also has a dark green marble flooring and features a lighting fixture sparkling with many small bulbs. The walls are decorated with Chinese gold paper.

The kitchen is compact and convenient and is equipped with the most modern built-ins.

The bedroom wing contains two large bedrooms, a powder room and a bath.

The artistic skill of Mrs. Hubbard, a prominent interior decorator, is evident throughout the entire house. Mr. and Mrs. Hubbard have an affection for both modern and antique furnishings; unusual and tasteful examples of both have been used in furnishing their home. The house has been beautifully landscaped, the fine lawns, colorful flower beds, and luxurious shrubbery proving that the Hubbards possess both aesthetic appreciation and green thumbs.

AMAZING FIRE FIGHTER — Latest addition of fine products available thru CLARK & STEARNS, INC., So. Commercial Street, Manchester, N. H.

The following is an outline of the qualities and effectiveness of ALBERT FIRE-PROOFING COMPOUND "DS"

a protective barrier, composed of a micro-porous, insulating foam layer.

This barrier layer blocks up access of the fire and heat to inflammable building materials, etc., thus preventing them from bursting into flame. Non-inflammable materials treated in this way are characterised by a substantial reduction of thermal conductivity, which reduces otherwise unavoidable damage or impairment of the static strength of structures.

This new development greatly reinforces measures designed to provide chemical fire protection, because

- it acts as an effective barrier and therefore provides considerably more protection, compared with the usual surface layer impregnation —
- in addition to timber, all wood-based materials and many other structural components can nowadays be treated against fire and heat hazards.

Chemical fire protection can now be given to a range of materials and in a way which was thought impossible only a few years ago. Wood, plywood and all wood-based materials (hardboard, fibre-board, acoustic board, chipboard, etc.) can be given this preventive treatment in the same way as other structural components, cable ducts, plastics panels, etc. The excellent adhesive properties of ALBERT "DS" have been proved by application to widely different surfaces of various materials and components, under practical service conditions. The method of application is easy and can be adapted to the characteristics of the particular project.

ALBERT FIREPROOFING COMPOUND "DS" gives reliable, permanent and economical protection in theatres, cinemas, exhibition halls, restaurants, official buildings, department stores, schools, hotels, broadcasting installations, libraries, etc. — in fact wherever local authorities require fire protection of materials and structural components, or where additional protection is necessary, for example in factories, mines, traffic installations, storage rooms, on memorials, in lifts, on fire protection doors or cable ducts. In many cases, the conventional protection is increased or replaced with equally good or better protection which also saves costs, time and space.

The effectiveness of ALBERT FIREPROOFING COMPOUND "DS" is demonstrated by a large number of tests carried out by the most authoritative institutions and in accordance with modern methods, both at home and abroad.
